

# Bandit Soil Treatment

## What Can Bandit Do For You?

### What is Bandit?

Bandit solidifies loose & granular soils eliminating erosion while creating a barrier that vegetation will not penetrate. 5 gal will treat anywhere from 60 to 300 sq.ft. of material, depending on application requirements. Bandit will last for many years.

### Bandit Strength

Depending on the amount of Bandit that is applied per sq. ft. and the type of granular material being used, the compressive strength will vary. Bandit was lab-tested using smaller "pea-gravel", and with 10 oz per sq.ft. being applied, the compressive strength was an astonishing 11.8 mpa.

**Note:** 10 mpa concrete is commonly used for patios and walkways.

### Applying Bandit

- For larger projects, Bandit can be applied using backpack sprayers.
- For smaller projects, Bandit can be applied by pouring it with the supplied applicator.
- Bandit can be injected into the ground to support items such as posts, or to solidify ground for above surface structures.

Bandit Soil Treatment

### Here's What Customer's are Saying

*"Bandit is like the new duct tape, I'm not sure we will ever figure out all of its uses."*

*Wayne,  
Saskatchewan*

*"We have been looking for a product like this for a long time. The cost savings for our little community will be huge."*

*Maintenance Foreman,  
Small Town, Saskatchewan*

DURABLE · DECORATIVE · COST EFFECTIVE  
SOIL TREATMENT

Decorative Landscaping   Patio Grout   Path Building   Around Signs  
Parking Pads   Soil Stabilization   Post Holes   Patio Support   Sidewalks  
Vegetation Control   Commercial Landscaping   Structural Support

## Soil Erosion

Bandit Soil Treatment is a low viscosity, single component resin designed to stabilize loose and granular soils. When applied topically, Bandit creates a barrier holding the soils together, helping fight soil erosion.

## Weed Control

When applied on top of the ground, Bandit acts as the ultimate weed barrier. Once Bandit has cured, it forms an impenetrable crust that vegetation cannot grow through, with the added benefit of looking great!

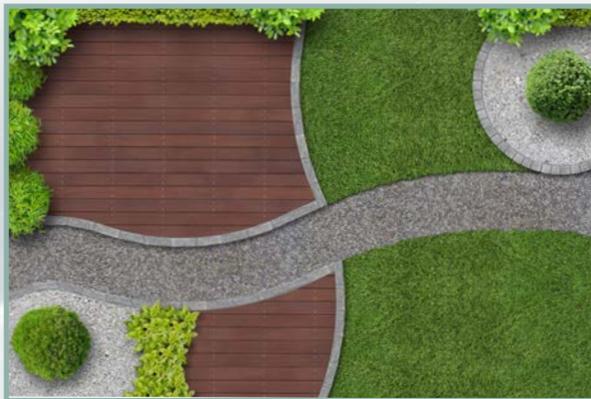

## Pot Hole Repair

Pot holes in asphalt and gravel roads can be repaired with minimal equipment and personnel, resulting in time and costs savings.

## Path Building

Solidifying granular material, such as pea gravel, for your pathway, will ensure materials will not scatter and will stay where you put it.

## Decorative Landscaping

As part of beautifying your yard, treating your granular materials with Bandit will ensure your efforts will endure the test of time, keeping your oasis beautiful for many years to come.
