

# Metal Roof Restorations

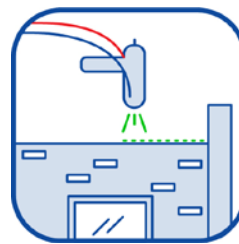

## SPFRS-Sprayed Polyurethane Foam Roof System

**RENEW** YOUR  
METAL ROOF  
with Added  
Insulation Value

## What Causes Metal Roofs to Leak?

- Fastener failures
- Deteriorated sealants and closures
- Physical and weather damage
- Expansion and contraction caused by freeze/thaw cycles can result in issues at fasteners, seams and penetrations

**More Cost  
Effective than  
Metal Roof  
Replacement**

Restore your existing metal roof with a Sprayed Polyurethane Foam Roof System (SPFRS), and enjoy the renewed comfort of a solid roof, while adding the benefit of reducing heating and cooling costs.

# Metal Roof Restorations

## SPFRS-Sprayed Polyurethane Foam Roof System

## Advantages of a New SPFRS

- No more leaks! Insulation is coated creating a superior watertight roof covering
- Covers existing fasteners
- Energy savings from monolithic (seamless) Insulation
- Reduces thermal bridging
- New roof warranty included
- Stops rust and corrosion
- Non-disruptive to occupants and activities within the building
- A well maintained SPFRS roof will last the life of the building
- Ability to re-slope ponding areas

SPFRS is a long-lasting liquid spray applied roof insulation system that shields from the elements, eliminates metal roof fail points at seams and fasteners, while increasing energy efficiency, saving you money on heating and cooling costs.
